

*For Turbo-milling intervention /
clearing Tubing and liners from cement and scale
in harsh environments of O&G and GT wells.*

✓ *Efficient Mechanical removal of Scales*

- High revolution per minute delivered to tackle hard scale deposit,
- Reduce the scale to powder for :
 - efficient transportation to surface,
 - Minimizing plugging of surface equipment's.

✓ *All Metallic construction & concentric design*

- No Elastomer components means compatible for High Temperature DH condition,
- Consistent outputs for reliable performance along the job duration,
- Flow controlled with reduced reactive torque,
- Zero damage while stalling – still free flow & no peak of pressure,

✓ *Ability to perform in dual phase power fluid*

- Fully compatible with compressive fluid.

✓ *Compatible for the pumping aggressive fluid*

- Composed of inert components to chemical.

✓ *Durability of the tool in demanding utilization*

- Extended the time between maintenance requirement enabling batch intervention in remote location.
